# Lalan Group Since 1940

The Lalan Group is one of Sri Lanka's largest diversified conglomerates, with an extensive global network encompassing pan-industry interests in rubber, tea and other plantation crops (such as cardamom, cinnamon, coffee and stevia), re-forestry, renewable energy, manufacturing, service industries, engineering and the leisure sector.

Established three generations ago in Sri Lanka, the company which started primarily as a rubber commodity trading operation has expanded, developed and modernized its operational model in keeping with global changes. However, the group remains rooted in the family company's traditional, social and environmentally conscious values. Lalan's quest is to build strong brands in each sector and further establish itself as a fully integrated and trusted partner in the global market. Therefore, LALAN ECO-LATEX was set up as a wholly owned subsidiary of LALAN, to provide sustainable sleep solutions by promoting natural products that help maintain the environment.

## Our Mission

To be a global market leader and responsible player in providing truly sustainable sleep solutions to meet modern consumer needs, whilst focusing on achieving its business goals and outcomes

## Our Vision

To become internationally recognized for creating a healthy and positive impact on the sustainable sleep industry.

# Sustainable living concept

## Sustainable

Sustainable products provide environmental, social and economic benefits while protecting public health and the environment over their whole life cycle, from the extraction of raw materials until the final disposal of the product at the end of its life cycle.

## Eco-friendly natural material

Natural latex is the most organic, Although it requires minimal amounts of additives to process the rubber (5%), manufacturers today are opting for natural latex foam that is derived botanically. The mattress you purchase and sleep on sourced by tapping latex from rubber trees and is fully biodegradable. Best of all, free of the volatile chemicals that are unpleasant and detrimental to your health.

## The unmatched feeling

So what is it like to sleep on a latex mattress? (The initial feeling is like sinking into a memory foam mattress but it conforms to your weight, and temperature. However the similarities stop there). You don't sink into a latex mattress like you would in a memory foam mattress, and thus there is no feeling of being restricted to one position. You are free to move and change positions and the latex mattress will change with you, providing the support you need no matter how you prefer to sleep. This support is crucial for a good night's sleep because, when your spine is supported, your muscles no longer need to provide any support and can truly relax and experience REM sleep.

## Health benefits

Natural latex foam is antimicrobial and repels dust mites and mildew. Eco latex mattresses are also more breathable, circulate air better, further enhances the relief of pressure from your body, helps with blood circulation and much more. The only danger is that you may never want to get up.

All conventional mattresses are made of materials with toxic chemicals and are used widely in the mattress industry today, and their long-term effects are worrisome. Scientists are concerned about their effects on the developing brains of children. Researchers at Harvard's School of Public Health have described toxic chemicals in the environment as a "silent pandemic."

# 3RD PARTY INTERNATIONAL CERTIFICATIONS & TESTING CONFIRMATIONS

## ECO Institut GMBH, Germany

*"Tested for Hazardous emissions and VOC (volatile organic compounds).  
Tested for Chlorophenol (Below limit of determination 0.1mg/Kg)"*

This test is done by the ECO institute Gmbh (Germany) for the residue of harmful chemical fillers, synthetic rubber and hazardous components and emissions in the product. This assures that the latex mattress or sheet excludes harmful chemicals, consist of natural or organic latex and is in accordance with the ECO test criteria.

## Associated Laboratories, California, USA

*"Compliance to California Proposition 65 Law for non-detection of Carcinogenic substances"*

Prop 65 includes a wide-ranging list of chemicals, many of which are contained in commonly used products, which can cause cancer and birth defects and to reduce or eliminate exposures to those chemicals. These chemicals are tested on products of concern in the state of California.

## Rubber Consultants, UK

*"Tested for Butadiene confirming only 100% natural latex is used"*

This test checks the latex foam for any additions of fillers or synthetic latex blend. This test confirms that Eco Latex only uses 100% natural latex.

## 100% Natural, "Zero blended"

Our products are manufactured exclusively with 100% natural latex. No fillers or synthetic latex is added.

## OEKO Tex

*Tested for harmful substances including illegal substances & legally regulated substances in textile raw materials*

The OEKO-TEX® Standard 100 is an independent testing and certification system for textile raw materials, intermediate and end products at all stages of production.

## Control Union, Netherlands

### Global Organic Latex Standards (GOLS)

This certification confirms that products made from certified organic botanical latex are processed according to Global Organic Latex Standards.

## Control Union, Netherlands

### Global Organic Textile Standards (GOTS)

This certification confirms that fabrics used in the products are made of certified organic fibers per Global Organic Textile Standards

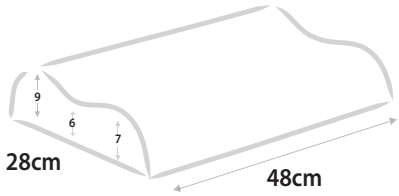

## Forestry Stewardship Council, USA

Forest Stewardship Council (FSC) certifications confirm that the plantations are managed responsibly in accordance to world forests certifications. The certifications focus on :

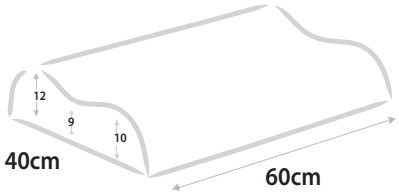

- Being environmentally Appropriate: Protecting and maintaining natural communities and high conservation value forests.
- Being socially Beneficial: Respecting the rights of workers, community and indigenous people.

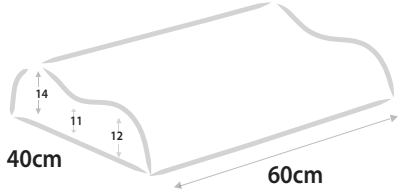

# SPECIFICATIONS
